

## Harrier scales up with Lundberg Tech: Automated waste handling for 24/7 production

"We bought our first WasteTech 140 back in 2022 for our Newton Abbot production site. The unit quickly proved its value by automating waste handling, allowing our team to focus on other essential tasks," says Jeremy Rawley, Head of HSE & Facilities at Harrier LLC.

Harrier LLC is a leading UK-based photo printing company with over 30 years of experience. They produce bespoke photo products and gifts for major brands, retailers, and app-based services, operating from facilities in Newton Abbot and Prague. Known for their innovation and large-scale production capabilities, Harrier prints hundreds of millions of photos annually.

Following the success of the first installation, Harrier has expanded its use of WasteTech 140 units. Today, they operate three units, two at Newton Abbot and one at the Prague site.

Asked what motivated Harrier to invest in an automated waste handling solution, Rawley explains:

"We're printing 24/7 and only stop on Christmas Day. The automated waste handling solution offers the maximum efficiency in terms of waste volume and labour resources."

## TESTIMONIAL

2/2

Finding the right supplier was crucial. Ultimately, Harrier chose Lundberg Tech. When asked why, Rawley is clear:

"Lundberg Tech offers technologically superior waste handling equipment, reliability, first class sales and technical support."

The benefits since installation of the automated waste handling solutions speak for themselves:

"Minimal waste handling, reduced waste volume, and maximum machinery uptime."

Rawley concludes with a final remark on the partnership:

"They always offer first-class support and service."
