### Continuous efficiency:

### Why Labelident trusts Lundberg Tech for waste handling

"Being a long-term Lundberg Tech customer we understand the importance of a waste handling solution that works continuously," states Steffen Friedrich, Production Manager at Labelident GmbH.

Back in October 2020, Labelident GmbH (Kroschke Group, HQ Braunschweig, Germany) aimed to improve its waste handling process and contacted Lundberg Tech. An All-in-one Unit, the WasteTech 80-80U was rented at the beginning of 2021, tested successfully, and later purchased.

Steffen Friedrich explains: "The total waste volume is reduced because narrower grids are now possible.

Another advantage is the lower waste disposal rates and the fact that our employees no longer have to dispose of the waste themselves."

As production needs grew, Labelident invested in a central waste handling system in June 2022 for 11 machines, prepared for future expansion for 3 machines. Additional upgrades followed at their production site in Schweinfurt, including a stationary container press, automatic filter system, air return system and summer winter valve. Extensions continued through 2024 and 2025 to support new machines.

Steffen Friedrich continues: "The main advantage of your system lies in the prevention of downtime and the reduction of grid cracks. The exact amount depends on the specific job and product; we would estimate it at a 10–20% increase in speed."

"The Central System is reliable and built on close cooperation with Lundberg Tech, starting in the preplanning and engineering phase and continuing through installations and two expansions. Their ability to find the right solutions has been invaluable," Steffen Friedrich concludes.

With Labelident's evolving future needs, Lundberg Tech is ready to keep supporting them.

### About Labelident GmbH

For over 20 years, Labelident GmbH has been a trusted partner for high-quality labels in rolls, sheets, or accordion folds, producing exactly the quantities customers need. With efficient processes and advanced in-house machinery, they die-cut over 15 million labels daily. Independent of external suppliers, Labelident ships directly from stock, ensuring fast delivery across Europe.
